

SafeRise Protocol

INVESTOR & COLLABORATION · ONE

Andre Robley · Founder
Kenor International B.V.
thesaferiseprotocol.com

One capability. Two subscription programmes.

SafeRise is the regulation and attention layer that makes everything else land. State-specific protocols for personal life and for the working environment — **self-guided at the core**, with human support as levels above it rather than as the product.

THE CAPACITY BENEATH EVERYDAY LIFE

B2C Support across personal life

For individuals navigating their inner experience, relationships and work. State-specific protocols help members regain steadiness and choose how to respond, in the moment rather than afterwards.

Personal Transformation · Relationship Healing · Professional Performance

B2B Access through the organisation

People and HR teams, alongside departmental leaders, fund the shared foundation with pathways tailored to industry and department pressures. Members keep their personal work private.

Fourteen roles · sixteen industries · green industry, blue role

THE PHILOSOPHY: ATTENTION → AWARENESS → AUTHORSHIP

Attention concerns what a person notices and gives their internal resources to. Awareness creates room to see an experience and its possible meanings more clearly. Authorship is the capacity to choose a response and take responsibility for it.

THE METHODOLOGY: RECOGNISE → REGULATE → RELEASE → RISE

Recognise

The experience, without making it a diagnosis or an identity

Regulate

Enough to regain steadiness and command of attention

Release

Secondary struggle, self-blame, the demand to resolve it now

Rise

Into a deliberate next action, including pausing or seeking support

WHY IT SURVIVES SCRUTINY

Not **therapy**

Not a **course**

Not **gamified self-improvement**

Not an **outcome promise**

Six frameworks, tiered by evidence. Porges, HeartMath and Kross lead and stand independently; Maté, Jung and Watts are labelled clinical-practice or interpretive and never presented as mechanism. **Clinical governance is a gate, not a footnote** — four tracks stay unbuilt until a licensed clinician is contracted.

The foundation for launch. 30 written protocols across three tracks, with 308 supporting resources. The next phase expands to ten B2C tracks and an eight-track B2B core. SafeRise supports access to the judgment and skills people already have, when pressure makes them harder to reach.

A complete experience around each state.

Guidance for the immediate moment, with resources that support understanding, integration and everyday use. Protocols are matched to a state a person recognises in themselves — not to a diagnosis, and not to a curriculum.

THE CURRENT BOOK

ENTRY

Free

Track 01, permanently, with an account. The wedge — not a trial

MEMBERSHIP

€19 / month

€190 a year. Single all-access tier across the whole library

LIVE SERVICES

€39 – €349

Workshops €39 pp; one-to-one €129, or three for €349

PLANNED, NOT LIVE

A **€29 tier** opens alongside €19 once the library doubles, at €290 a year. It is a pricing prerequisite that depends on eight tracks existing — it does not exist today, and nothing is sold against it.

ORGANISATIONAL ACCESS

What an organisation buys

An eight-track foundation every employee receives, plus one protocol built for their role and one for their industry. Seats are priced from **€15 down to €11** with volume; a delivered pilot programme is **€1,800**.

Where the line sits

The organisation creates the conditions and funds access. **The individual owns what happens inside their account.** Nothing a member writes or practises is visible to the employer.

WHAT SITS AROUND EACH PROTOCOL

Practice and understanding

Guided practice and cue cards support the immediate moment. Clear explanations, subject-matter expert insights and safe-practice guidance deepen understanding.

Private progress and journaling

Private journaling and progress tracking help members record experiences, recognise recurring patterns and see how responses change over time.

Support in everyday life

Disclosure and repair resources help members seek support, communicate what they need and carry the work into relationships and everyday life.

Live services add depth

Individual sessions, guided workshops and retreats sit alongside membership. Organisations can combine platform access with facilitated sessions scoped to their teams.

THIRTY PROTOCOLS, WRITTEN AND COVERED

Personal Transformation · Relationship Healing · Professional Performance — each protocol a recognisable state, with its own practice, resources and private journal.

Delivery capacity is the constraint, not demand. Roughly four hours a month of facilitator time exists today. Anything recurring is sized against that number, which is why the platform — not the facilitation — carries the model.

Build the next stage with us.

A six-month development and launch programme, supported by a proposed **\$15,000** bridge. Each phase has a defined deliverable, with the first organisational engagements informing the next specialist releases.

THE PROGRAMME

MONTHS 1-3 **Ten B2C tracks.** Complete the seven additional tracks in phased batches, following the existing protocol and resource architecture. Production includes editorial and specialist review, cover assets, recording and member journeys. The eight-track organisational core draws from the same library.

MONTHS 3-6 **B2B and specialist pathways.** Introduce the shared core through scoped programmes for selected teams. Develop Sales & Quota first, then Contact Centre around a tested short-format resource. Add a further department or industry pathway where a qualified buyer and a defined use case support the build.

THE BUYER MAP Sales and enablement leaders in technology and B2B services; People and learning leaders sponsoring manager cohorts; operations leaders in contact centres. Proposed entry audiences grounded in the founder's commercial background and the track planning documents.

COLLABORATORS BUILD THE PATHWAYS

Embodied Nutrition, movement and discipline, and clinical advisory contributions help translate specialist knowledge into SafeRise experiences. Each collaboration defines its content contribution, review responsibilities, production role and commercial terms.

What the bridge enables. Content production, specialist review, product readiness and initial proof-of-concept delivery within a founder-led operating model. Capital is not needed to build the product — it is needed to buy distribution, delivery capacity and evidence.

WHAT WE ARE BUILDING TOWARD

LIVE NOW

30 protocols, three tracks, plus the free Foundation Protocol

B2C BUILD-OUT

120 protocols across the consumer library

B2B BUILD-OUT

110 the Foundation 8 plus thirty role and industry protocols

LET US BUILD THE NEXT STAGE

Meet to explore **investment**, a **team proof of concept** or a **specialist collaboration**. An introduction to the right employer, or a pilot inside an organisation you can influence, moves this as far as the cheque does.
